OpenVPM

Synthetic external record

A fictional file for demonstrating attachment and retrieval

Demo reference

Record: DEMO-DOC-001
Patient label: Fictional patient A
Practice label: Fictional test clinic
Filename: synthetic-external-record.pdf

Purpose

Use this file in a fictional test clinic to check upload, patient association, filename display, and file download. The content is deliberately nonclinical.

Retrieval check

After downloading the saved document, find DEMO-DOC-001 and compare the file with the original. This checks that the expected attachment was retained with the selected patient.

Demonstration data only

All text is invented. This file contains no real patient or client information, no lab values, and no treatment advice. An uploaded report remains a file; it does not automatically create structured laboratory results in OpenVPM.
